Working together
for a healthier future

Introduction

This place pack has been developed around the ICB Clinical Priorities signed off by the ICB Board in March 23 and demonstrate how they align to the population outcomes we are aiming to achieve. (See tables on the right hand side.)

The data contained within this pack shows the West Essex data compared with East & North Herts, South West Herts and the overall ICB.

The following page shows an overview table for West Essex and their PCNs.

The pack aims to provide details of where place is achieving better outcomes for its populations and where there are areas of opportunity. Where data allows, the variation between PCNs is shown to enable targeted interventions to improve outcomes. Further granular detail by practice can be found within the PCN Packs.

Data sources used within this pack include SUS, QOF, Ardens Manager and CVD Prevent.

PCN, Locality and other Places packs can be found:

Population health management – Hertfordshire and West Essex Integrated Care System (hertsandwestessexics.org.uk)

Here you can also find previous PCN packs outlining the descriptive demographics for the PCNs and the recently updated Health Needs Analysis Refresh with comparative indicators.

Area	Clinical Priority
CYP	• Improved Readiness for school in children eligible for FSM • Reduce rates of Childhood obesity • Reduced unnecessary A&E attendances and admissions
Prevention and Health Inequalities	• Reduced premature mortality rate for CVD
LTC & Frailty	• Reduce attendance and admissions for falls, people with frailty and people in last year of life • Development of more proactive, preventative care models for management of LTC and Frailty
Mental Health	• Reducing suicide rates and attendances/ admission rates for self-harm • Reducing rates of A&E attendances involving substance misuse and violence

Outcome	Definition
Improve life expectancy	Average age at death for people who have died in the last 12 months
Improve healthy life expectancy	Average age of people who have left the 'healthy' segment in the last 12 months
Reduce the proportion of people living with advanced disease and complexity	Proportion of the registered population who are in the advanced disease and complexity segment (segment)
Reduce the rate of ambulatory care sensitive emergency hospital admissions	Rate of ambulatory care sensitive emergency admissions in the last 12 months
Reduce the overall spend on emergency hospital admissions	Spend on Emergency hospital admissions within a financial year

Hertfordshire and West Essex Integrated Care System

WE Place at a Glance

The table on the right provides a summary of the data contained within this pack. It highlights how the Place data compares with ICB., as well all the PCNs are, compared to Place.

For WE areas of opportunity highlighted are :

- *Childhood obesity in Year 6*

- *Admissions for asthma and epilepsy in children*

- *Observed versus expected prevalence of LTC*

- *Annual review completed for LTCs*

- *Secondary prevention CVD who are on high intensity statins*

- *Diabetics with all 8 care processes completed*

- *Admissions for hip fractures in the over 75s*

- *Identification of SMI, LD and depression*

The following link takes you to Ardens Manager where there are reports. Here you will find the latest information on identification of LTCs and details of case finding Ardens searches available within EMIS and Systemone.
https://app.ardensmanager.com/login

Clinical Priority	Metric	PCNs compared to Place average						Place compared to ICB average

Rates of Childhood Obesity

- In keeping with the national trend, the Place rates for Childhood Obesity are higher for year 6 in comparison to reception children.

- West Essex has similar prevalence of obesity at reception but is higher than ICB for Year 6.

- The PCNs within WE with the highest prevalence of childhood obesity at year 6 are Harlow North PCN, Harlow South PCN and Epping Forest North PCN. National data shows that areas with higher levels of deprivation have the highest rates of childhood obesity.

Obesity Prevalence in Reception and Year 6 Children

Hertfordshire and West Essex Integrated Care System

A&E attendances for Asthma (CYP)

- Data for the 12 months up to November 2023 shows WE Place has a higher rate of A&E attendances for Children and Young People for Asthma (data on the right-hand side).

- Rates of Children and Young People attending A&E for Asthma have increased since 2020/21 post covid with WE rates consistently higher compared to ICB rates.

- There is variation between the PCNs with Harlow North and Harlow South with the highest rates.

Asthma ED Activity DSR per 100,000 by Year for Places against ICB rates

Asthma ED Activity DSR per 100,000 by PCN for Place: WE and period Dec-22 to Nov-23 against ICB & Place rates

Hertfordshire and West Essex Integrated Care System

Source: SUS

Admissions for Asthma (CYP)

- WE admission rates for asthma for Children is lower compared to the ICB (rolling years data middle chart).

- The trend data shows a decreasing trend in the rate of admissions.

- A lower percentage of Asthma Reviews are carried out within West Essex Place in comparison to ENH, SWH and the ICB. However, the QOF is for all ages and children specific reviews cannot be identified within the data.

- Place: 47

Percentage of patients with asthma, on the register, who have had an asthma review in the preceding 12 months

Categories: SWH, ENH, WE, ICB

Hertfordshire and West Essex Integrated Care System

Admissions for Wheeze (CYP)

- WE Place has a lower rates of Children and Young People admitted to hospital for abnormalities of breathing including wheeze compared to the overall ICB. Recent analysis of UEC data showed Wheeze as a significant reason for admission within young children across HWE.

- When looking at the data by PCN, North Uttlesford PCN has the highest rates of Children and Young People admitted to Hospital for Wheeze within West Essex Place.
Abnormalities of breathing (inc Wheezing) Inpatient Activity DSR per 100,000 by Year for Places against ICB rates

Abnormalities of breathing (inc Wheezing) Inpatient Activity DSR per 100,000 by PCN for Place: WE and period Dec-22 to Nov-23 against ICB & Place rates

Hertfordshire and West Essex Integrated Care System

Source: SUS

Admissions for Diabetes (CYP)

- Diabetes is identified as an area of focus within the Core 20 plus 5 for children. The latest data shows that the WE rate of admission is similar to the ICB.

- The numbers of children admitted for diabetes are small and this should be considered when looking at the data. There is variation between the data observed at PCN geography.

- The data for diabetes will continue to be monitored at HCP and ICB footprints.
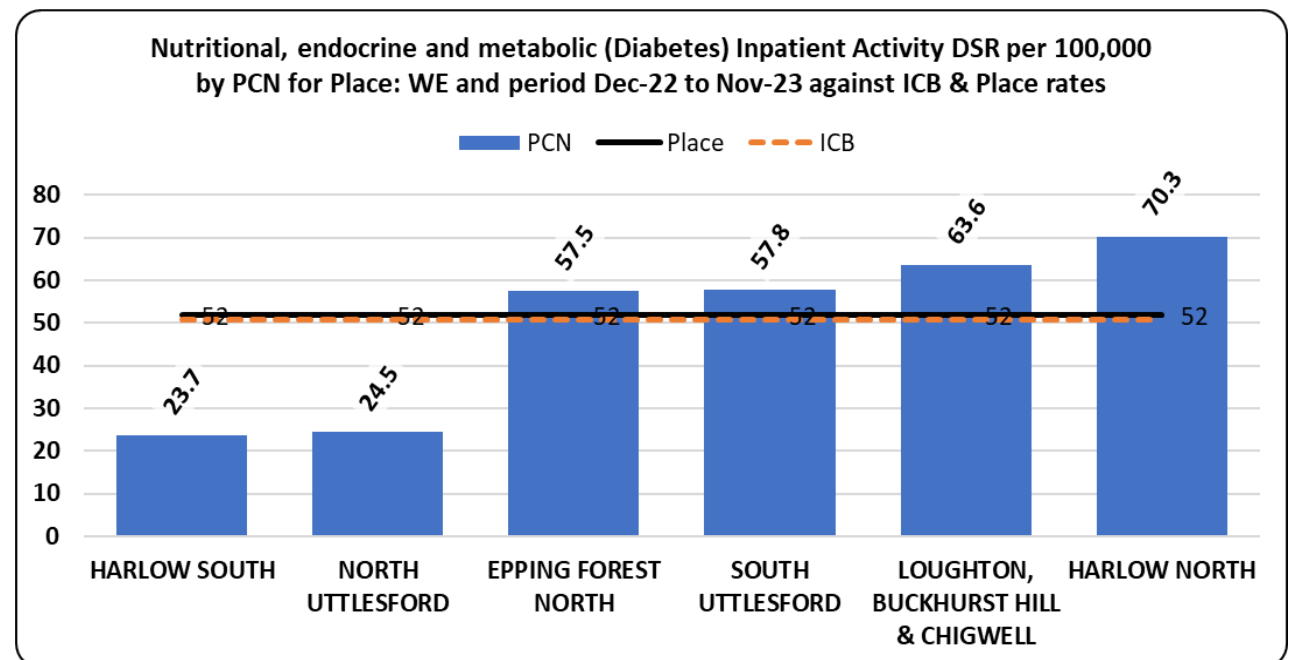

Nutritional, endocrine and metabolic (Diabetes) Inpatient Activity DSR per 100,000 by Year for Places against ICB rates

Legend: ENH, SWH, WE, ICB

Admissions for Epilepsy (CYP)

- Epilepsy is identified as an area of focus within the Core 20 plus 5 for children. The latest data shows that the WE rate of admission is slightly higher compared to the ICB, however previous trend show lower rates.

- The numbers of children admitted for epilepsy are small and therefore fluctuations in the trend are more prominent. When looking at the data by PCN there is variation between the PCNs in WE place.

- The data for epilepsy will continue to be monitored at wider HCP and ICB footprints.

Epilepsy Inpatient Activity DSR per 100,000 by Year for Places against ICB rates

Epilepsy Inpatient Activity DSR per 100,000 by PCN for Place: WE and period Dec-22 to Nov-23 against ICB & Place rates

Prevention and health inequalities – Lifestyle factors - Smoking

- WE Place data for smoking shows a similar picture to the ICB with 93.4% of patients with a smoking status recorded in the last 12 months. (QOF mar 23).

- The table to the right gives detail by condition of the opportunity for further recording of smoking status. This shows the position in January. Practices can access the latest position via https://app.ardensmanager.com/login

ECF 2023-24 - Condition Section Under Smoker, Smoking Status, and Smoking Status Recorded - as of Jan. 2024						
	Pre-Diabetes		Diabetes		Atrial Fibrillation	
Practices	Remaining % of Population with a Smoking status	Smoking Available Patients - Total Number	Remaining % of Population with a Smoking status	Smoking Available Patients - Total Number	Remaining % of Population with a Smoking status	Smoking Available Patients - Total Number

* with any or any combination of the following conditions: CHD, PAD, stroke or TIA, hypertension, diabetes, COPD, CKD, asthma, schizophrenia, bipolar affective disorder or other psychoses

Source: Link: QOF Data Set & ECF Jan. 2024

Prevention and health inequalities – Lifestyle factors - Smoking

- Smoking is a significant cause of morbidity and mortality. The long-term risk of smoking to individuals has been quantified in a 50-year cohort study of British doctors. Observing deaths in smokers and non-smokers over a 50-year period, the study concluded that 'about half of all regular smokers will eventually be killed by their habit'. In Europe, about 20% of deaths from cardiovascular disease (CVD) in men and about 3% of deaths from CVD in women are due to smoking - Nice Advisory Paper NM39

- West Essex has a higher percentage of patients over 15 offered treatment. The chart on the right shows this detail by PCN.

Percentage of patients aged 15+ who are current smokers with a record of an offer of support & treatment within preceding 24 months

	E&N Herts	S&W Herts	West Essex	ICB

91.2%	92.0%	94.4%	95.0%	95.2%	95.8%

Hertfordshire and West Essex Integrated Care System

Prevention and health inequalities – Lifestyle factors - Smoking

- The health economic models for the NICE public health guidance PH10 on smoking cessation in primary care and the technology appraisal on bupropion and nicotine replacement therapy found smoking cessation interventions to be cost effective. The NICE costing report reported only the short-term additional cost of implementing the guidance by primary care trusts (PCTs). This is because the estimated longer-term improvements in health, and consequent reduction in expenditure in treating smoking-related diseases, was expected to be delivered over a much longer timeframe. These cost implications could therefore not be calculated directly in the implementation costs of the guideline - Nice Advisory Paper NM39

- As seen for people over the age of 15 offered treatment WE also has a higher percentage of patients identified with conditions* offered treatment compared to the ICB.

Percentage of patients* who are current smokers with a record of an offer of support & treatment within the preceding 12 months

E&N Herts	92.2%
S&W Herts	96.2%
West Essex	96.1%
ICB	94.6%

Development of more proactive, preventative care models for LTC - Prevalence

LTC Outcome – Reduce the proportion of people with a long-term condition who are in the advanced disease & complexity or frailty & end of life segments

ICB overarching outcome of reduce the proportion of people living with advanced disease and complexity

- Following the expected and observed prevalence modelling in the previous slide, where there are opportunities for further identification, this slide looks at the recorded prevalence by practice for the Place compared with the ICB.

- The development of an ICB Data Platform will create a longitudinal record for our patients which will allow the data to be viewed by different characteristics such as deprivation, ethnicity, co-morbidities.

- For LTCs, QOF and ECF data can help us understand areas of opportunity for improving outcomes for our population living with LTCs.

Hertfordshire and West Essex Integrated Care System

Lipid management : Percentage of people on lipid lowering therapy for secondary prevention who are on low and medium intensity statins

- National lipid management pathways (Link to guidance) recommend the use of high intensity statins for all people with a history of Cardiovascular disease as well as where high dose statins are needed to control cholesterol. People on high intensity statins will see a greater reduction in c-LDL levels and reduce the risk of cardiovascular events.

- Data from OpenPrescribing provides information on the proportion of people who are on statins that are currently prescribed low or medium intensity doses. The ICS is a negative outlier in this area, with a high proportion of people not on a high intensity statin.

- The data for WE Place shows that there is an opportunity to improve statin treatment, prescribing a higher proportion of people onto high intensity statins. The Place is in the 95th percentile with 35.0% of people not on high intensity statins. This compares to 28.3% nationally.   Individual PCN data can be found within the PCN packs.

WE Place – Items of Low and Medium Intensity Statins as a Percentage of Items of All Statins by Year

ICB – Items of Low and Medium Intensity Statins as a Percentage of Items of All Statins by Year

Reduction in admissions rates of Chronic Ambulatory Care Sensitive (ACS) conditions

Chronic Ambulatory Care Sensitive Conditions: Activity as DSR per 100,000 by Year for Places against ICB rates

Chronic Ambulatory Care Sensitive Conditions: Number of Emergency Admissions per Condition as DSR per 100,000 by PCN - Inpatient Activity for WE and period Dec-22 to Nov-23 against ICB & Place rates
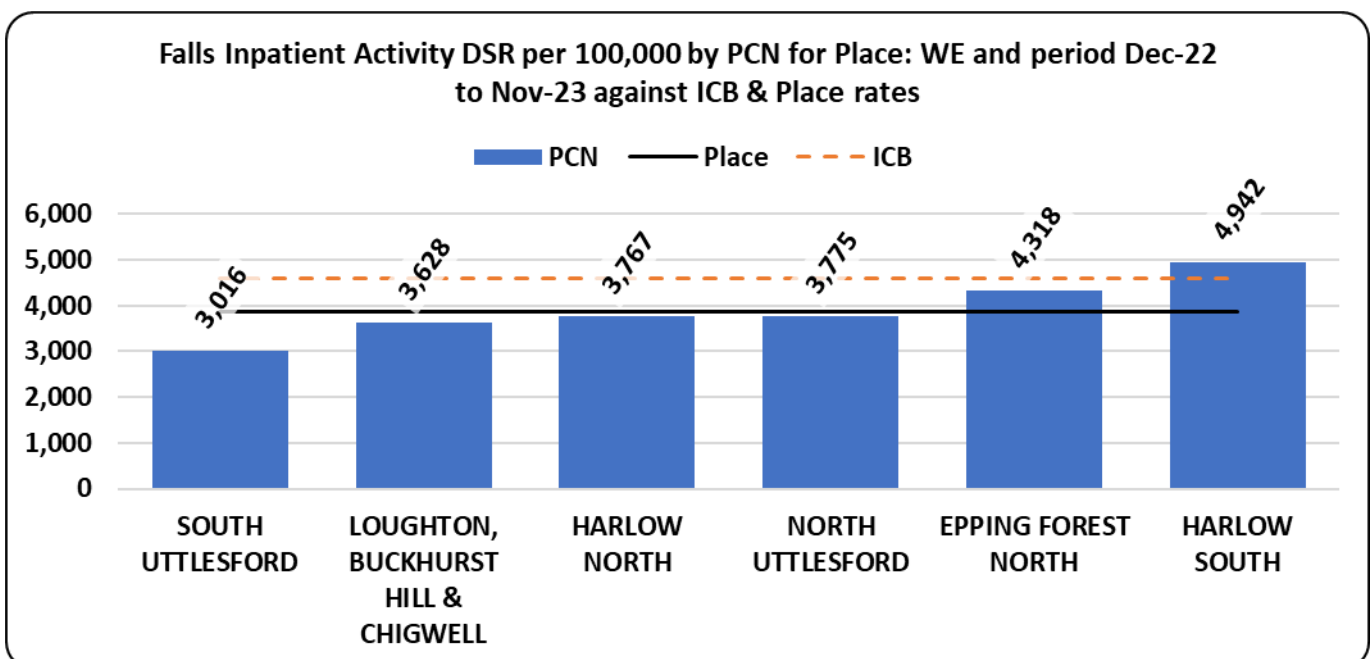

- Ambulatory care sensitive (ACS) conditions are conditions where effective community care and person-centred care can help prevent the need for hospital admission. (Nuffield Trust)

- WE Place's admission rate for Chronic ACS conditions is similar to the ICB rate when looking at the 12 months data up to November 2023.

- Details of the conditions with the highest volumes of admissions can be found within the PCN packs these include heart failure, COPD and Atrial Fibrillation.

Emergency Admission rates for Falls in persons aged +75

- When looking at the rolling 12 months up to November 2023 the data shows that WE Place has a lower rate of admissions for falls than the ICB. There is variation in the data for the practices within the Place.

- The trend data for falls shows a decreasing trend for WE.

- Data in the following pages shows the data for the PCNs compared with Place and the ICB for areas within the ECF that aim to support reducing falls. Frailty Clinical Leads will be able to advise on current programmes of work within your area aimed at reducing falls.

Falls Inpatient Activity DSR per 100,000 by Year for Places against ICB rates

ECF indicators for frailty and EOL

- The data shows that WE has a lower percentage of falls frat scores completed, when compared to the ICB as at end Dec 23.

- The WE percentage of the population recorded as moderately or severely frail is higher compared to the ICB

- The WE percentage of the population recorded on the End of Life register is higher than the ICB with variation between the PCNs. This may indicate further opportunity for identification in some PCNs.

- The data contained within the table below is up to the end of December, the latest position can be found at Ardens Manager.

Prevalence of mental health conditions (QOF)

- The data on this page looks at the recorded prevalence of conditions within the Mental Health section of QOF. It shows the WE prevalence compared with ENH, SWH and the ICB. Future iterations will include comparisons against modelled expected prevalence.

- The data shows that WE has a lower recorded prevalence for SMI and LD which may indicate an opportunity for further identification. Details for individual PCNs can be found within their packs.

Mental Health QOF Indicators 22-23

- Mental Health QOF metrics for 2022-23 show that WE Place is achieving lower for all metrics for both SMI and Depression in comparison to the ICB.

- Within this there is variation between the PCNs. The individual practices can be viewed within the PCN packs.

- Ardens searches are available to practices to identify those people with SMI without a care plan or recording of monitoring.

	SMI					Depression
	% of patients with SMI who have a care plan	% of patients with SMI who have a record of BMI in the preceding 12 months	% of patients with SMI who have a record of alcohol consumption in preceding 12 months	% of patients with SMI who have a record of a lipid profile in the preceding 12 months	% of patients with SMI who have a record of blood glucose of HbA1C in preceding 12 months	% of patients with a diagnosis of depression who have been reviewed within 10-56 days

Emergency Admissions Rates for Self – Harm

- WE Place has a lower rate of admissions for self-harm compared with the ICB.

- When looking at the data it should be noted that the numbers at Place level are small and therefore more fluctuation between the years will be seen.

- The data will continue to be monitored at wider HCP and ICB footprints.

Self-harm Inpatient Activity DSR per 100,000 by Year for Places against ICB rates

Self-harm Inpatient Activity DSR per 100,000 by PCN for Place: WE and period Dec-22 to Nov-23 against ICB & Place rates
